

CALL FOR SUBMISSIONS

Clinical Diabetes Special Issue on Diabetes Technology

The editors of *Clinical Diabetes* seek manuscript submissions for a special-topic issue on Diabetes Technology scheduled for publication in mid-December 2020. This issue will include both invited and unsolicited accepted manuscripts.

ARTICLE FOCUS:

The editors seek articles tailored to the primary care audience on a wide range of topics under the broad general umbrella of “diabetes technology.” These could include research reports, descriptions of innovative programs, review articles, or commentaries on topics such as glucose meters, continuous glucose monitoring systems, and other diabetes-related medical devices; emerging glycemic control metrics such as time in range; new software and mobile apps; technology-enabled diabetes care, education, and support; and other uses of technology in clinical practice. Articles that report on original research or successful quality improvement initiatives are of particular interest. Before writing, contact the journal’s editorial team (debbie@kendalleditorial.com) to ensure that your topic is not already being covered in the issue.

Submit online by **May 15, 2020**, at <https://mc.manuscriptcentral.com/clinical-diabetes>

HOW TO SUBMIT:

Select the article category “Special Issue - Technology” when submitting. Please refer to the Instructions for Authors under the Info tab at clinical.diabetesjournals.org or contact EditorialOffice@diabetes.org for more information. Submitted articles that are not accepted for the special-topic issue will still be considered for publication in a regular issue of the journal.
